## AGRICULTURAL STATISTICS OF ENGLAND AND WALES.

---

The annual AGRICULTURAL STATISTICS for 1914 are issued in four parts as follows:—

Part I. (Od. 7926, price 6d.).

Report.

Tables: Section I.—Area under Crops and Live Stock.  
" " II.—Value of Land.

Part II. (Od. 7954, price 3½d.).

Report.

Tables: Section III.—Produce of Crops.  
" " IV.—Weather Statistics.

Part III. (Od. 8112, price 5d.).

Report.

Tables: Section V.—Prices of Corn and Bread.  
" " VI.—Prices of Live Stock and other Agricultural Produce.  
" " VII.—Supply of Live Stock at Markets.  
" " VIII.—Trade in Live Stock with Ireland.

Part IV. (Od. 8152, price 5d.).

Report.

Tables: Section IX.—Imports of Agricultural Produce.  
" " X.—Exports of Agricultural Produce.

NOTE.—These publications may be purchased (either directly or through a bookseller) only from the agents mentioned on the title-page.

## AGRICULTURAL STATISTICS,

1915.

### PART I.

---

#### REPORT.

To the Secretary of the Board of Agriculture and Fisheries.

Sir,

I BEG to submit the First Part of the Volume of Agricultural Statistics for the year 1915, containing returns of the acreage of crops and number of live stock on agricultural holdings exceeding one acre in extent in June last.

The collection of the returns was again undertaken by the Commissioners of Customs and Excise, whose officers distributed and collected the schedules and forwarded them to the Board.

The collection of the returns for the Isle of Man and the Channel Islands was again undertaken by the respective Lieutenant-Governors.

For the statistics relating to Scotland and Ireland included in the present publication the Board are indebted to the Departments of Agriculture for those countries.

#### AREA UNDER CULTIVATION.

According to the latest measurements of the Ordnance Survey the total area of land in England and Wales is 37,137,564 acres. Of this total, 10,965,707 acres were returned as arable land, 16,087,393 acres as permanent grass, and 3,764,706 acres as rough grazings (mountain and heath land used for grazing), in 1915. Each of these totals was less than that returned under the same heading in 1914, the total decrease in the acreage included in the return being 77,763 acres. This reduction is greater than the average decrease of the past 10 years, but, though some part of the area which has disappeared from the returns is no doubt permanently lost to agriculture, much of it has been acquired temporarily for military purposes. The decline in the cultivated area (arable

land and permanent grass) was general throughout the country, the greatest reduction being recorded in the south-eastern counties. The arable area was increased in the eastern counties, but in other parts of the country decreases were general, and, except in the south-eastern counties, these reductions coincided with additions to the area of permanent grass in most counties.

Returns of the area of woodland were not collected in 1915, but, assuming that the acreage has remained fairly constant since 1913, when the area of woods was returned as 1,884,068 acres, the total acreage of land in England and Wales which is either under cultivation, grazed or woodland, is about 32,702,000 acres, or 88 per cent. of the total area of land in the country.

#### NUMBER AND SIZE OF HOLDINGS.

The total number of agricultural holdings above one acre in England and Wales in 1915 was 433,353, or 1,771 less than in 1914. The returns were again analysed, and the number and total acreage of the holdings of various sizes, with a comparison with 1914, are given in the following table:—

Size-group.	Number.		Total Acreage.	
	1915.	1914.	1915.	1914.
Above 1 and not exceeding 5 acres - }	90,643	91,570	280,379	282,998
Above 5 and not exceeding 20 acres - }	120,616	121,698	1,358,145	1,366,900
Above 20 and not exceeding 50 acres - }	78,430	78,454	2,634,058	2,636,064
Above 50 and not exceeding 100 acres - }	59,657	59,514	4,342,894	4,340,952
Above 100 and not exceeding 150 acres - }	32,045	31,860	3,965,025	3,940,848
Above 150 and not exceeding 300 acres - }	37,635	37,615	7,850,676	7,848,494
Above 300 acres - - -	14,327	14,418	6,621,923	6,693,221
Total - - -	433,353	435,124	27,053,100	27,114,004

It will be seen that, as in 1914, there was a reduction in the number of the largest-sized holdings, and also of small holdings, whilst the number of medium-sized farms was increased. Holdings above 1 and not exceeding 5 acres were reduced by 927, whilst those from 5 to 20 acres were reduced by 1,082. The reduction in the number of the largest-sized farms was 86, and the total acreage of holdings of this class showed a decrease of 76,298 acres. The increase in the number of medium-sized farms occurred almost wholly in those under 150 acres in extent, holdings above 50 and not exceeding 100 acres showing an addition of 143, and those from 100 to

150 acres an addition of 185, whilst the total acreage of holdings above 50 and not exceeding 300 acres was increased by 28,876 acres.

The greatest reduction in the total number of holdings occurred in the midland and northern counties, but the tendency to reduce the number of small holdings and increase the number of medium-sized holdings was fairly general throughout the country. The chief exception was the eastern division of England, where the number of small holdings was increased by 88—mainly among those from 1 to 5 acres, those from 5 to 20 acres being decreased—and the number in the size-groups 50 to 300 acres reduced by 14. In South Wales also there were more small holdings than in 1914, but in this division the increase occurred in those from 5 to 50 acres, the number in the smallest size-group being decreased.

#### CORN CROPS.

The area under the three chief corn crops—wheat, barley, and oats—in England and Wales in 1915 was 5,489,939 acres, an increase of 248,044 acres as compared with 1914. Wheat and oats were both grown on increased areas, but the acreage under barley was reduced. The greatest increase was in wheat, and the total acreage under this crop exceeded that of oats for the first time since 1898. Except for oats in the south-west of England and in the south of Wales extensions of the acreage of wheat and oats, and reductions in the area of barley, were general throughout the country.

The acreage under Wheat in 1915 amounted to 2,170,170 acres, being 362,672 acres (20 per cent.) greater than in 1914, and 434,243 acres (25 per cent.) above the average of the 10 years 1905-1914. It is necessary to go back as far as 1891 to find a year in which the area devoted to this crop exceeded that of 1915. Every county returned increased areas, the increase in Wales, 11,623 acres, or 31 per cent., being relatively greater than that in England. In the eastern division 96,000 acres were added to the acreage, in the north-eastern division 71,000 acres, in the south-eastern division 54,000 acres, and in the east-midland division 41,000 acres. The northern division, which showed the greatest relative increase in 1914, had the smallest relative increase in 1915, only 10,250 acres, rather more than 10 per cent., being added to the area under this crop.

The area under Barley was reduced by 273,049 acres, and the total, 1,231,722 acres, was the lowest yet recorded. Five counties, four of which were in Wales, returned increased areas, but in every division of England, except the south-western, where the reduction was about 8 per cent., the acreage was reduced by 15 to 25 per cent. The decrease in Wales was relatively smaller, amounting to only 5 per cent.

The acreage returned as under Oats was 2,088,047 acres, an increase of 158,421 acres as compared with 1914, but only 24,869 acres above the average of the previous 10 years. The whole of the increase was in England, there being practically no change in Wales, an extension in the north of that country being counterbalanced by a reduction in the south. The acreage sown with this crop in the south-west of England was 5,800 acres less than in 1914, but in every other division of England the acreage was increased, although there was a fairly large reduction in Monmouthshire and smaller decreases in a few other counties. The chief increases were in the north-eastern counties, 49,500 acres; the northern counties, 32,500 acres; the eastern counties, 32,000 acres; and the north-western counties, 22,000 acres.

Beans were grown on 266,515 acres in 1915, this being 27,500 acres (9 per cent.) less than in 1914, and 14,383 acres below the 10-year average. The chief reduction was in the north-eastern division, with a decrease of 6,200 acres, although there was an increase of 1,000 acres in the East Riding of Yorkshire. The eastern division returned 5,400 acres less than in 1914, whilst the east-midland, west-midland, and south-western divisions each had decreases of between 4,000 and 5,000 acres.

There was also a reduction in the acreage under Peas, the total, 129,381 acres, being 39,460 acres, or 23 per cent., less than in 1914, and the lowest yet recorded. Decreases were general throughout the country, and, as with beans, the greatest reduction was in the north-eastern division, where the area was diminished by 12,200 acres. The greatest relative reductions were in the east-midland division with a drop of over 7,000 acres, or 40 per cent., and in the west-midland division, where the area was reduced by 4,400 acres, or 36 per cent.

The total area under the six crops—wheat, barley, oats, rye, beans, and peas—in 1915 was 5,933,516 acres, an increase of 174,865 acres as compared with 1914, and the largest total recorded since 1900.

#### POTATO AND ROOT CROPS.

The acreage planted with Potatoes was 463,399 acres, or 1,778 acres more than in 1914, and 28,450 acres more than the average of the 10 years 1905-14. Only once since these returns were first collected, viz., in 1905, when 464,208 acres were under this crop, has the acreage exceeded that in 1915. Additions to the area were general in the south, midlands, and Wales, there being increases of 3,200 acres in the south-eastern counties, 2,400 acres in the east-midland counties, and 1,900 acres in the south-western counties of England, whilst Wales extended its acreage by 1,000 acres. Lincolnshire added 380 acres to its area under this crop, increases in Kesteven and Lindsey more than counterbalancing a decrease of 1,730 acres in Holland, but

generally there was little change as compared with 1914 in the east and north-east. In the north and north-west decreases were fairly general, the north-western division having 6,400 acres less than in 1914. The reduction in Lancashire was 2,550 acres and in Cheshire 2,740 acres, whilst the West Riding of Yorkshire added 1,350 acres to its acreage under this crop.

The acreage of Turnips and Swedes was again reduced, and for the fourth year in succession is the smallest on record. The total, 931,856 acres, was 113,238 acres, 11 per cent., less than in 1914, and 172,801 acres, 16 per cent., less than the average of the previous 10 years. Every county returned smaller areas, the reductions amounting to 27,500 acres in the north-eastern division, 14,500 acres in the west-midland division, 13,500 acres in the eastern and south-eastern divisions, 12,000 acres in the south-western division, 11,500 acres in the east-midland division, and 10,000 acres in the northern division.

The reduction in the acreage of Mangolds was relatively smaller than that of turnips and swedes, the total, 413,723 acres, being only 4 per cent. (18,644 acres) less than in 1914. In the north and north-west of England and in Wales additions to the acreage were general, but in other parts of the country every division showed a decrease, although a few counties returned slightly increased areas. The chief reductions were in the eastern division with 8,700 acres less, the south-eastern and south-western divisions with 4,000 acres less, and the west-midland division with 3,200 acres less than in 1914. The additions in the northern and north-western divisions were 1,600 acres and 1,400 acres respectively, whilst Wales added 400 acres to this crop.

#### HOPS.

The acreage under Hops was reduced by 1,917 acres, and the total area under this crop in 1915 was 34,744 acres, or 10 per cent., less than the 10-year average. This is the first year since 1909 in which the acreage under hops has been reduced. Decreases were common to every county; 1,562 acres were withdrawn from this crop in the south-eastern district, Kent accounting for 1,291 acres, whilst in the west-midland counties the reduction amounted to 355 acres.

#### CLOVER AND ROTATION GRASSES.

The decline in the acreage of Clover, Sainfoin, and Grasses under Rotation, which has gone on steadily since 1907, was continued in 1915, the total, 2,362,365 acres, being 18,986 acres less than in 1914, and 331,102 acres below the average of the 10 years 1905-14. Every county in the northern and north-western divisions had reduced areas, the north-western division

returning 17,800 acres and the northern division 8,500 acres less than in 1914. The eastern and south-eastern divisions also returned diminished areas, the reduction in each division being about 8,000 acres. On the other hand, the area was increased in the north-eastern division by about 10,000 acres, in the west-midland division by 6,000 acres, and in the east-midland division by 4,800 acres. Most Welsh counties returned smaller areas, but an increase of 3,000 acres in Carnarvonshire and smaller extensions in Montgomeryshire and Pembrokeshire more than counterbalanced these, and in this country as a whole about 800 acres were added to the acreage returned under these crops.

The greater part of the decrease was in the area reserved for mowing, there being a reduction of 16,840 acres in the seeds hay area, and the total, 1,538,067 acres, was again the lowest on record. The north-eastern, midland, and south-western divisions returned increased areas, whilst the northern, north-western, eastern, and south-eastern divisions showed reductions. Wales increased its seeds hay area by about 1,000 acres.

Particulars of the area under miscellaneous crops are given in Tables 3 and 8 on pages 22-31 and 38-69; and of the area under orchard and other fruit in Tables 9 and 10 on pages 70 and 71.

#### BARE FALLOW.

The acreage left as Bare Fallow in 1915 was 309,639 acres, or 31,098 acres less than in 1914. In the north-western division every county except Cumberland returned small increases, but in other parts of the country decreases were general. Dorset, Wiltshire, Berkshire, the East Riding of Yorkshire, and Norfolk were the only counties to return fairly large additions to the area of bare fallow, the chief addition being in Norfolk, where the increase was due to land being flooded.

#### PERMANENT GRASS.

The acreage of Permanent Grass was 28,367 acres less than in 1914, but the total, 16,087,393 acres, was 16,000 greater than that returned in 1913. Speaking generally, the acreage was reduced in the eastern, north-eastern, and south-eastern counties, whilst in other parts of the country most counties returned increased areas. In the eastern counties, and in Cornwall, Cheshire, Derby, Anglesey, Carnarvon, Carmarthen, and Pembroke, the reduction in the area of permanent grass coincided with increases in the arable area, but in the south-eastern counties the reduction in the area of grass land does not appear to have been due to the bringing of this land under the plough, as the arable area was also decreased.

The area reserved for hay in 1915 was 4,651,609 acres, a decrease of 133,842 acres as compared with 1914, and the smallest area returned since 1909. Decreases were general except in the south-eastern division, Kent, Surrey, and Sussex all returning increased areas, and in this division as a whole the acreage from which meadow hay was taken was 13,000 acres greater than in 1914. The chief reductions were in the west-midland division, nearly 27,000 acres, in the northern and east-midland divisions, about 23,000 acres, and in the north-western division, 21,000 acres, whilst the decrease in Wales was 13,600 acres.

The area kept entirely for grazing was increased by 105,485 acres, additions being general in all except the south-eastern division, where there was a reduction of 27,500 acres. In the northern and east-midland divisions the increase was about 26,000 acres, in the west-midland and south-western divisions 20,000 acres, and in the north-western division 16,000 acres.

The total acreage of hay (whether seeds or meadow) was 6,189,676 acres, a decrease of 150,682 acres as compared with 1914, and the smallest area recorded since 1901. The increase in meadow hay more than counterbalanced the decrease in seeds hay in the south-eastern division, but every other division returned reduced areas, the decrease in the north-western division being as much as 35,000 acres and in the northern division 32,000 acres.

#### HORSES.

The total number of Horses on agricultural holdings in England and Wales, in 1915, was 1,287,182, or 112,365 (8 per cent.) less than the numbers returned in 1914. Every county participated in this decrease.

The number of horses used for agricultural purposes, which includes mares kept for breeding, returned on the 4th June, 1915, was 729,079, being a decrease of 62,218, or 8 per cent., on the year. Every county returned smaller numbers, the greatest relative decreases being in the east-midland and eastern divisions with reductions of 9·3 per cent. (7,000) and 9 per cent. (9,000) respectively, whilst the smallest relative reductions were in the northern and north-western divisions with losses of 5·8 per cent. (nearly 5,000) and 6·6 per cent. (6,000) respectively.

The other class of broken horses on farms, viz., saddle, carriage or trap, and vanner horses not used for the work of the farm, showed a relatively heavier decrease, the total, 249,094, being 36,482, or nearly 13 per cent., less than in 1914. The reduction in the case of saddle horses was nearly 25 per cent., only 44,420 being returned in 1915 as compared with 58,687 a year earlier. Carriage and trap horses were also kept in considerably smaller numbers, 20,745, or 12 per cent., fewer horses of this class being returned than in 1914, when the total

was 174,314. The reduction in the case of vanners was much smaller, the total, 51,105, being only 1,470 less than in the previous year.

The decline in horse-breeding which was referred to in last year's report was continued in 1915, but not to so great an extent as in 1914. The number of foals on the 4th June 1915 was 99,242, a decrease of 2,864 on the year, and nearly 13,000 below the average of the ten years 1905-14. As in 1914 the decline was relatively greater in Wales than in England, the reduction in the number of foals in the Principality being 1,097, or 5·5 per cent, as compared with a decrease of only 1,767 or 2·1 per cent. in England. The only division which returned increased numbers was the northern, with a small increase of 120. The total decrease in the country was almost equally divided between light and heavy foals.

Stallions above two years old used or intended to be used for service, on the other hand, showed an increase; the total, 7,689, being 189 greater than in 1914. The whole of the increase was in light stallions, there being a trifling decrease among heavy stallions. Of the total 2,969 were returned as light and 4,720 as heavy.

While in the distribution of stallions as between light and heavy, light stallions improved their position in the country as a whole, there was no corresponding change as regards foals. In Wales, however, the breeding of light horses declined to a relatively greater extent than that of heavy horses.

Unbroken horses, one year old and above, decreased by 10,990, the total returned being 202,078. Every division returned smaller numbers, the chief reductions being in the north-eastern and south-western divisions, with decreases of 3,100 and 1,600 respectively.

#### CATTLE.

The total number of Cattle returned in 1915 was 6,064,154, 186,210 more than in 1914, and the largest number recorded since these returns were first collected. Every division except the south-eastern returned increased numbers. The decrease in Kent was 5,000, and in Sussex 3,800, whilst there were also fairly large reductions in Norfolk and Suffolk, about 3,000 in each case.

The net addition of 186,210 was made up as follows:—Cows and heifers in milk or in calf decreased by 49,717, other cattle two years and above, increased by 41,997, other cattle one year and under two, by 122,273; and calves under one year, by 71,657.

The total milking herd of the country in 1915 was 2,434,503. This represented a decrease of 49,717, but apart from last year, the total was the largest yet recorded, and was 93,337 above

the average of the ten years 1905-14. Every division of England, except the west-midland, returned smaller numbers, but Wales showed an increase.

The number of cows and heifers returned as being in milk on the 4th June 1915 was 1,881,674, a loss of 25,942 as compared with the number in milk a year earlier, but some 175,000 more than in 1913. Decreases were general in all the divisions of England, the chief losses being 6,700 in the south-eastern division, 5,200 in the east-midland division, 5,000 in the south-western division, and 4,000 in the eastern division. The only counties in England which returned increased numbers were Monmouth, Hereford, Northumberland, Cumberland, Rutland, and Durham, but five Welsh counties added to their numbers, and for Wales as a whole the reduction was only 218.

There were also fewer cows in calf but not in milk on the 4th June, the total, 257,173, being 7,510 less than in 1914. The greater part of the reduction occurred in the east and south-east of England, decreases of nearly 2,900 in the south-eastern and east-midland divisions and about 1,300 in the eastern division being recorded. In the north and south-west the numbers were also reduced, but not to the same extent, whilst in the west-midland division of England and in Wales there were increases, the addition in Wales being 1,000, or 6½ per cent.

The number of heifers carrying their first calves was 295,656, or 16,265 (5 per cent.) less than in 1914. As with in-calf cows, the chief losses were in the east and south-east of England, the east-midland division returning 6,500 and the south-eastern division 5,000 less than in 1914, whilst the west-midland division had an increase of 1,500. There was, however, a small decrease in Wales, as well as in the northern and north-western divisions of England.

In spite of the reduction in the milking herd of the country, there was a general increase in the number of cattle under one year old, the total returned in 1915, 1,338,100, being 71,857 greater than in 1914, and the largest recorded since this class was first separately distinguished in the returns in 1893. Apart from London, Kent and Suffolk were the only counties which returned smaller numbers; the chief additions were 12,300 in the west-midland division, 11,200 in the north-western division, and 10,700 in the south-western division, whilst the increase in Wales amounted to nearly 9,000.

The number of cattle one year old and under two also increased; and, as with the younger cattle, the total was the largest recorded since 1893. The increase in England and Wales amounted to 122,273, or 10 per cent., the total in 1915 being 1,297,223. Every division returned increased numbers, and only one county, Cumberland, showed a reduction, which was, however, quite small. The west-midland division returned 21,200 more than in 1914; the north-western division 20,800;

the south-western division 15,500; and the east-midland division 14,600 more. The increase in Wales amounted to 16,100, or 9 per cent.

Cattle two years old and above, other than cows and heifers in milk or in calf, were also kept in larger numbers than in 1914, but the increase was not so general throughout the country as in the case of the two classes already referred to. The total, 994,328, was 42,000, nearly 4½ per cent. greater than in 1914. Increases were general in the midlands and north, whilst in the south and in Wales most counties returned smaller numbers. The northern division returned 13,400, the east-midland division 12,900; the north-western division 9,900; and the west-midland division 7,700 more than in 1914; whilst the reduction in the eastern division was 2,200; in the south-eastern division 1,900; and in Wales 1,500.

#### SHEEP.

The total number of Sheep in England and Wales on the 4th June, 1915, was 17,522,577, or an increase of 262,883 as compared with 1914. The west-midland, south-western, northern and north-western divisions of England, and Wales returned increased numbers, the only counties in these divisions to record appreciable decreases being Wiltshire, Northumberland, Merioneth, and Cardigan. On the other hand, the south-eastern, eastern, north-eastern, and east-midland divisions returned smaller numbers, though the East Riding of Yorkshire, Middlesex, Hertford, Buckingham, Oxford, and Warwick added appreciably to their flocks. Apart from the south-western division, where there was an increase of 98,000 following a decrease of 36,000 in the previous year, the changes in each division were in the same direction as in 1914. The recovery which has taken place in the last two years from the very low level of 1913, when the number of sheep in the country was the smallest on record, has therefore, generally speaking, been confined to the hill districts of the north and west, while the numbers have continued to fall in the lowlands of the east.

The number of ewes kept for breeding was 6,871,738, an increase of 33,404 as compared with 1914. The addition in Wales was 50,325, there being a reduction of 16,921 in England. Merioneth was the only county in Wales which returned smaller numbers, whilst in the west-midland, south-western, northern and north-western divisions of England ewe flocks were also increased, Wiltshire being the only county in these divisions to record a loss. The eastern, north-eastern, south-eastern and east midland divisions, on the other hand, all returned smaller numbers, only three counties in these divisions returning small increases.

In spite of the increase in the number of breeding ewes there was a reduction in the number of lambs, the total, 7,169,192,

being 100,617 less than in 1914, an unsatisfactory lambing season no doubt being the chief cause. As with ewes, Wales returned an increase of about 50,000. Lambing results were particularly unsatisfactory amongst hill flocks in the north, and in the northern division there was a decrease of 31,400 lambs, although 18,700 more ewes were returned. In every other division the changes in the number of lambs were in the same direction as in the case of ewes. The reduction in the north-eastern division was 74,000, Lincolnshire accounting for 56,000 of this decrease, whilst the south-eastern division returned 67,000 less than in 1914, the reduction in Kent being 47,000. The increase in the south-western division was 43,000, and in the west-midland division, 28,000. Merioneth and Cardigau were the only Welsh counties which returned smaller numbers than in 1914.

The number of sheep one year old and above, other than ewes, was 3,481,647, an increase of 330,096, or 10 per cent., as compared with 1914. The whole of the increase occurred in England, only two counties in Wales, Radnor and Brecon, returning additions, and in the Principality as a whole there was a reduction of 13,000. Every division of England except the south-eastern, where there was a loss of 2,600, returned increased numbers, the addition in the north-eastern division being 67,000; in the northern division, 62,000; in the north-western division, 57,000; in the east-midland division, 54,500; in the west-midland division, 53,000; and in the south-western division, 44,000.

#### Pigs.

Following the large increase in the number of Pigs in 1914, there was a reduction of 61,454 (2½ per cent.) in 1915, but the total, 2,420,027, was more than 300,000 greater than in 1913. Decreases were general in every division of the country, although several counties returned additions.

The number of sows kept for breeding was 298,163, a decrease of 42,221, or 12 per cent., as compared with 1914. Decreases were general, only four counties returning trifling additions. The greatest relative reductions in England occurred in the north-western and northern divisions with decreases of 5,920 (18 per cent.) and 4,240 (15 per cent.) respectively; whilst the south-eastern division with a reduction of less than 9 per cent. had the smallest relative loss. There was a drop of 2,980 in the number in Wales, of which the northern division accounted for 1,830.

The reduction in the number of other pigs was much smaller, the total, 2,121,864, being only 19,233 less than in 1914. The east-midland, west-midland, and northern divisions added about 2,000 each to their numbers. The eastern division returned 7,100 less than in 1914, losses in Suffolk and Essex more than counterbalancing increases in the other counties of the division.

The decrease in the north-eastern division was 4,400, in the north-western division 4,100, and in the south-eastern division 3,000. Somerset, Dorset, and Devon returned additions, but a large reduction in Cornwall brought the total for the south-western division some 1,400 lower than in 1914. The reduction in North Wales was 4,100 and in South Wales 1,000.

#### GAINS AND LOSSES IN LIVE STOCK IN ENGLAND AND WALES.

The changes in the numbers of the several classes of live stock between June 1914 and June 1915 are summarised in the following table :—

GAINS.			LOSSES.		
	No.				No.
HORSES :—			HORSES :—		
Stallions, above 2 years old, used, or intended to be used, for service.	189		Agricultural (including breeding mares).	63,218	
CATTLE :—			Unbroken horses :		
Other cattle :—			One year and above -	10,990	
2 years and above - - -	41,397		Under 1 year - - -	2,864	
1 year and under 2 - - -	122,273		Other horses - - -	38,483	
Under 1 year - - -	71,857		CATTLE :—		
SHREEP :—			Cows and heifers in milk -	25,942	
Ewes, kept for breeding -	33,404		Cows in calf, but not in milk.	7,510	
Other sheep, 1 year and above.	330,096		Heifers in calf - - -	16,285	
			SHREEP :—		
			Other sheep, under 1 year -	100,617	
			PIGS :—		
			Sows, kept for breeding -	42,221	
			Other pigs - - -	19,283	

The large reduction in the number of horses, which occurred mainly amongst broken horses, was no doubt due to the demands of the army. As regards the other farm live stock, the numbers were well maintained on the whole, although a reduction in the number of breeding cattle and of sows does not augur well for the future. It must be remembered, however, that the number of cows and heifers in milk or in calf was, apart from 1914, the largest yet recorded; whilst the loss in the number of breeding sows, though considerable, may very quickly be replaced.

I have the honour to be, Sir,

Your obedient servant,

27th March 1916.

R. H. REW.

*Section I.*

## AGRICULTURAL STATISTICS OF ENGLAND AND WALES.

---

The annual AGRICULTURAL STATISTICS for 1914 are issued in four parts, as follows:—

Part I. (Cd. 7926, price 6d.).

Report.

Tables: Section I.—Area under Crops and Live Stock.

" " II.—Value of Land.

Part II. (Cd. 7954, price 3½d.).

Report.

Tables: Section III.—Produce of Crops.

" " IV.—Weather Statistics.

Part III. (Cd. 8112, price 5d.).

Report.

Tables: Section V.—Prices of Corn and Bread.

" " VI.—Prices of Live Stock and other Agricultural Produce.

" " VII.—Supply of Live Stock at Markets.

" " VIII.—Trade in Live Stock with Ireland.

Part IV. (Cd. 8152, price 5d.).

Report.

Tables: Section IX.—Imports of Agricultural Produce.

" " X.—Exports of Agricultural Produce.

Agricultural Statistics for 1915, Part I. (Cd. 8240, price 4d.).

NOTE.—These publications may be purchased (either directly or through a Bookseller) only from the agents mentioned on the title-page.

AGRICULTURAL STATISTICS,

1915.

PART II.

---

REPORT.

*To the Secretary of the Board of Agriculture and Fisheries.*

Sir,

I beg to submit the second Part of the Agricultural Statistics for 1915, containing returns of the yield of crops in England and Wales compiled from the estimates furnished by the Crop Reporters of the Board. Summaries of the corresponding returns for Scotland and Ireland, supplied by the respective Agricultural Departments, are included in Table 24, so as to present complete totals for the United Kingdom.

The preliminary statements, giving the average yield per acre and total production of the crops for the whole of England and Wales, were issued as follows:—hops on the 15th October; corn, pulse, and hay, on the 5th November; and potatoes and roots on the 24th November.

CORN CROPS.

The average yield per acre of Wheat in England and Wales in 1915 was 31·20 bushels, being more than a bushel less than in 1914, and four-fifths of a bushel below the average of the ten years 1905-14. But, owing to the large increase in the acreage under this crop, the total production, 8,464,741 quarters, was 1,150,000 quarters more than last year, and 1,500,000 quarters above the decennial mean. In every

A 3

division of England, except the south-western, where the yield was  $1\frac{1}{2}$  bushels per acre above average, crops were not as good as usual. The worst results were obtained in the north-eastern division with a crop  $1\frac{1}{2}$  bushels per acre under average, whilst in the eastern, south-eastern and northern divisions the yields were about one bushel, in the north-western division seven-eighths of a bushel, and in the midlands three-quarters of a bushel per acre below the ten years' average. Wales had a crop two-thirds of a bushel per acre better than usual.

The acreage under **Barley** in 1915 showed a considerable reduction as compared with previous years, and this, combined with a poor yield per acre, resulted in a total crop of only 4,527,929 quarters, which was nearly 1,700,000 quarters below the average of the previous decade, and by far the smallest crop recorded since the produce returns were first collected in 1884. The yield per acre, 29.41 bushels, was  $3\frac{1}{4}$  bushels under average and, apart from 1893, the lowest yet recorded. As with wheat, the worst results were obtained in the north-eastern counties where the crop was  $4\frac{1}{2}$  bushels per acre under average, whilst in the eastern and east-midland divisions yields were over 4 bushels, and in the west-midland, northern and north-western divisions of England and in north Wales from 3 to 4 bushels per acre under average. Crops were not so unsatisfactory in the south, but the south-eastern division yielded  $2\frac{1}{2}$  bushels and the south-western division nearly one bushel per acre less than usual, whilst south Wales had practically an average crop.

The total production of **Oats** in 1915 was 10,386,907 quarters, or an increase of 830,000 quarters as compared with 1914. The yield per acre, 39.80 bushels, was one-fifth of a bushel better than last year, but two-fifths of a bushel below the ten-year average. The south-western division, with a yield  $2\frac{1}{2}$  bushels per acre above average, had the most satisfactory crops, whilst yields were also better than usual in south Wales by  $2\frac{1}{2}$  bushels per acre; in the northern division of England by  $1\frac{1}{2}$  bushels per acre, and in the west-midland division by one-fifth of a bushel per acre. On the other hand, the north-western division had a crop of  $3\frac{1}{4}$  bushels per acre under average, whilst north Wales and the north-eastern division of England returned yields  $2\frac{1}{2}$  bushels per acre below the mean. Yields were also under average in the eastern division to the extent of  $1\frac{1}{2}$  bushels per acre; in the east-midland division seven-eighths of a bushel, and in the south-eastern division nearly one-third of a bushel per acre.

The yield per acre of **Beans** was 27.78 bushels, being  $2\frac{1}{2}$  bushels per acre below the average of the previous decade, and  $2\frac{1}{2}$  bushels per acre less than last year. The acreage under this crop was also less than usual, and the total production, 894,599 quarters, was 150,000 quarters below the average of the ten years 1905-14, and the smallest recorded since 1904.

Crops were under average in every division of England. In the eastern and north-eastern divisions, where more than half the crop is grown, the yield was  $2\frac{1}{2}$  bushels per acre less than usual, in the east midland division nearly  $3\frac{1}{2}$  bushels per acre, in the west-midland division  $1\frac{1}{2}$  bushels per acre, and in the south-eastern division  $1\frac{1}{2}$  bushels per acre under average.

In spite of an increase of nearly  $1\frac{1}{2}$  bushels per acre in the yield of Peas as compared with last year, the total production, 299,226 quarters, was 70,000 quarters less than in 1914, owing to the largely reduced area under the crop. The yield per acre in the country as a whole was 24.36 bushels, or 2 bushels per acre under the average of the previous 10 years. In most parts of the country crops were unsatisfactory, the eastern division had a crop  $2\frac{1}{2}$  bushels, the north-eastern division  $2\frac{1}{4}$  bushels, the south-eastern division three-fifths of a bushel, and the east midland division  $2\frac{1}{2}$  bushels per acre under average.

#### WEIGHT OF GRAIN CROPS.

The estimated yield per acre, and total production in terms of weight, of wheat, barley and oats, in England and Wales are given in the following table:—

CROP.	Total Production.		Yield per Acre.	
	Quarters	= Cwts.	Bushels.	= Cwts.
Wheat	8,164,741	37,692,903	81.20	17.32
Barley	4,537,929	17,313,332	29.41	14.06
Oats	10,386,907	29,050,512	36.80	18.91

The estimated natural weight per bushel of these crops in 1914 and 1915, in each of the main divisions of the country is shown in the next table.

AGRICULTURAL DIVISIONS.	WHEAT.		BARLEY.		OATS.	
	1915.	1914.	1915.	1914.	1915.	1914.
ENGLAND :—	Lbs.	Lbs.	Lbs.	Lbs.	Lbs.	Lbs.
I.—E. and N.E. :—	62.2	63.0	58.6	59.8	59.4	40.8
II.—S.E. and E. Midland.	62.8	62.7	54.0	53.8	58.6	37.5
III.—W. Midland and S.W.	62.1	61.8	53.4	53.5	58.9	36.7
IV.—N. and N.W. :—	62.0	62.2	53.4	53.4	59.6	40.8
ENGLAND :—	62.2	62.7	53.6	53.7	59.2	39.2
WALES :—	61.0	61.1	52.6	53.8	59.1	39.7
ENGLAND AND WALES :—	62.2	62.6	53.5	53.7	59.2	39.3

There was little variation in the natural weight of wheat throughout England in 1915, but the average for the country, 62·2 lbs. per bushel, was about half a pound less than last year. Barley showed little change as compared with 1914 except in Wales, where samples were more than 1 lb. per bushel lighter. Oats were lighter than in 1914 in the east and north of England and in Wales, and considerably heavier in the south, but for the country, as a whole, the average natural weight was about the same as last year.

#### YIELD OF STRAW.

The estimates of the yield per acre of straw supplied by the Board's Crop Reporters are summarised for the main divisions of the country in the following table:—

AGRICULTURAL DIVISIONS.	WHEAT STRAW.		BARLEY STRAW.		OAT STRAW.	
	1915.	1914.	1915.	1914.	1915.	1914.
ENGLAND :—						
I.—E. and N.E. -	23	25	15	18	18	21
II.—S.E. and E. Midland	23	23	15	16	17	15
III.—W. Midland and S.W.	23	23	16	17	20	18
IV.—N. and N.W. -	26	26	18	22	21	23
ENGLAND - - - - -	23	25	16	18	19	20
WALES - - - - -	22	24	16	19	20	22
ENGLAND AND WALES -	23	25	16	18	19	20

The total production of wheat straw may therefore be estimated at 2,491,000 tons as compared with 2,216,000 tons in 1914, of barley straw 961,000 tons as compared with 1,357,000 tons; and of oat straw 1,969,000 tons as compared with 1,934,000 tons.

#### POTATO AND ROOT CROPS.

The yield per acre of Potatoes in England and Wales in 1915, 6·17 tons, was about one-quarter of a ton less than last year, but exactly equal to the average of the 10 years, 1905-14. The total production was 2,858,093 tons, about 100,000 tons less than in 1914, though 180,000 tons above average. Crops were lighter than usual in every county in the eastern division, and in the division as a whole the yield was more than half a ton per acre under average. Other divisions in the east of the country had average crops, but in the west results were better than usual; the south-western division having a crop two-thirds of a ton, the west-midland division one-third of a ton, and the north-western division one-eighth of a ton per acre above average. Every county in Wales returned heavier

crop than usual, and in the Principality as a whole the yield was more than half a ton per acre above average. Of the most important counties for this crop, Cambridgeshire had a yield two-thirds of a ton per acre lighter than usual, the West Riding of Yorkshire about half a ton per acre deficient, whilst Lincolnshire and Cheshire had crops just slightly lighter than usual. Lancashire on the other hand obtained a crop one-third of a ton per acre above average.

The total production of Turnips and Swedes in 1915, 11,807,527 tons, was 2,700,000 tons less than the average of the previous decade, owing mainly to the very small acreage under the crop. The yield per acre was also lighter than usual, being 12·71 tons, as compared with the decennial mean of 13·13 tons. Generally crops were below average except in the south-west and extreme north of England. The south-western division returned yields more than 1 ton per acre above average, and the northern division about one-quarter of a ton per acre above average. In the midlands, south-east and north-west of the country the crops were about 1½ tons per acre lighter than usual, in the eastern division about 1 ton per acre deficient, whilst Wales returned a crop two-thirds of a ton per acre under average.

The total production of Mangolds in 1915, 7,834,080 tons, was also under average, though not to the same extent as in the case of turnips and swedes, the deficiency being 700,000 tons. The yield per acre was 18·99 tons, or two-fifths of a ton below the average of the previous 10 years. The worst results were obtained in the south-eastern division, where the crop was about 2½ tons per acre under average, whilst the yields were 1½ tons and 1¾ tons per acre lighter than usual in the west-midland and eastern divisions respectively. The east-midland and north-western divisions also had under average crops, the former by nearly 1 ton per acre and the latter by two-thirds of a ton per acre. On the other hand yields were 1½ tons per acre heavier than usual in the south-western and north-eastern divisions, and half a ton per acre above average in the northern division. Wales had practically an average crop.

#### HAY.

Owing to the dry spring of 1915 the first Hay crops were light, and the acreage of grass land reserved for mowing was less than usual. The total crop of all kinds of hay, 6,586,737 tons, was nearly 700,000 tons less than the small crop of last year and 1,400,000 tons below the decennial average.

The total production of Clover Hay, 2,287,703 tons, was 158,000 tons less than the decennial mean, but 170,000 tons more than in 1914. The first cut was light, but the second crops, in many districts, especially in the midlands, were quite as good as or

even better than the first crops, so that the yield per acre in the country as a whole was 29·75 cwts., or seven-eighths of a cwt. above average. The best results were obtained in the midlands, the east-midland division returning a yield 7½ cwts., and the west-midland division 4½ cwts. per acre above average. Crops were also better than usual in the south-western division by more than 4 cwts. per acre, in the northern division by 1½ cwts. per acre, although crops were very light in Northumberland, and in the south-eastern division by three-quarters of a cwt. per acre. Poor crops were obtained in the north-western division, 3½ cwts. per acre under average; the north-eastern division, 1½ cwts. per acre under average; and in the eastern division, two-thirds of a cwt. under average. On the whole, the yield in Wales was about half a cwt. per acre less than usual, most counties returning poor crops.

The total production of Meadow Hay, was 4,299,034 tons, being 850,000 tons less than in 1914, and the smallest crop recorded since 1901. The yield per acre was 18·48 cwts., or 3 cwts. less than last year and 4½ cwts. below average. Under average crops were general throughout the country, Pembroke being the only county to return better yields than usual. The northern and north-western divisions fared worst, the yields in these divisions being 6½ cwts. and 7½ cwts. per acre respectively under average. The midlands and eastern counties also obtained very poor crops, the yield in the east-midland division being 5½ cwts., in the west-midland division 4 cwts., and in the eastern and north-eastern divisions 4½ cwts. per acre lighter than usual. South of the Thames the crops were not so deficient, but they were nevertheless from 3½ to 3½ cwts. per acre below average. The most satisfactory results were obtained in Wales, where the crop was only 1½ cwts. per acre less than usual.

#### Hops.

Hops experienced one of the worst attacks of aphid for many years, and the yield per acre, 7·33 cwts., was little more than half that obtained in 1914, and nearly 2½ cwts. less than the decennial mean. The total production was 254,609 cwts., as compared with 507,258 cwts. last year, and 376,804 cwts., the average of the ten years, 1905-14. Crops varied very considerably in different districts, the yield in East Kent being more than 9½ cwts. per acre, whilst in Surrey only 3 cwts. per acre were produced, and the small areas in less important counties practically failed. In Kent, as a whole, the yield per acre, 8½ cwts., was little more than 1½ cwts. under average, and in Sussex a yield of 7½ cwts. per acre (2½ cwts. under average) was produced, but the other south-eastern counties had very bad crops, Hampshire and Surrey having only about a third of a normal crop. The west-midland counties also did badly; Worcestershire had a crop of 4½ cwts. per acre (3½ cwts. under

average) and Herefordshire produced only  $3\frac{1}{2}$  cwts. per acre, or just half its average.

#### DURATION OF HARVEST.

The usual returns received from the Board's Crop Reporters of the earliest date of the cutting of corn in their districts are summarised in the following table for each division of England and for Wales. In supplying this information, the reporters are instructed to ignore exceptional cases of small areas on which cutting may have begun at a still earlier date.

AGRICULTURAL DIVISIONS.	WHEAT.	BARLEY.	OATS.
ENGLAND :—	Earliest Date.	Earliest Date.	Earliest Date.
I.—E. and N.E.	30 July	30 July	19 July
II.—S.E. and E. Midland	25 July	22 July	19 July
III.—W. Midland and S.W.	25 July	30 July	19 July
IV.—N. and N.W.	4 August	12 August	4 August
WALES	2 August	10 August	6 August

Harvest commenced in 1915 on the 19th July, a beginning being made with oats on that date in Hertfordshire, Middlesex, Berkshire, Buckinghamshire and Monmouthshire. This was eight days later than in 1914, and the latest date of the commencement of harvest since 1910. A start was made with barley cutting in Kent three days later, whilst the first wheat was cut in Sussex on the 25th July. Except in the case of wheat in Wales, where cutting began one day earlier, the harvesting of each of the crops was begun later than in 1914.

The average dates of the beginning and end of corn harvest in 1915 are given in the following table:—

AGRICULTURAL DIVISIONS.	WHEAT.		BARLEY.		OATS.	
	Average Commencement.	Average Finish.	Average Commencement.	Average Finish.	Average Commencement.	Average Finish.
ENGLAND :—						
I.	11 Aug.	16 Sept.	16 Aug.	19 Sept.	8 Aug.	17 Sept.
II.	10 Aug.	14 Sept.	15 Aug.	15 Sept.	4 Aug.	14 Sept.
III.	10 Aug.	13 Sept.	15 Aug.	15 Sept.	7 Aug.	15 Sept.
IV.	20 Aug.	25 Sept.	21 Aug.	26 Sept.	18 Aug.	26 Sept.
ENGLAND	12 Aug.	17 Sept.	17 Aug.	19 Sept.	9 Aug.	19 Sept.
WALES	15 Aug.	20 Sept.	20 Aug.	24 Sept.	17 Aug.	25 Sept.
ENGLAND AND WALES	13 Aug.	18 Sept.	17 Aug.	20 Sept.	11 Aug.	20 Sept.

On the average, harvest began about a week later than in 1914, but only two to four days later than the average of the ten years, 1905-14. As compared with last year the start was more delayed in the east and north of England than in the west and Wales, by some three to five days. Harvesting was impeded by unsettled weather until about the middle of August, and in the earlier districts of the east of the country it was more protracted than in 1914 by a few days, whilst in the west and north the average duration was a day or two less than last year. In the country, as a whole, the wheat harvest lasted 37 days on the average; the barley harvest, 35 days, and the oat harvest, 41 days. This was about four days less than the average of the previous ten years in the case of wheat and oats, and six days less in the case of barley.

#### CROPS OF THE UNITED KINGDOM.

The following statement gives the total production in the United Kingdom of the crops for which estimates are obtained in each of the past three years:—

CROPS.	1915.	1914.	1913.
	Tons.	Tons.	Tons.
Wheat	2,048,000	1,744,000	1,576,000
Barley	1,112,000	1,540,000	1,680,000
Oats	3,148,000	2,937,000	2,980,000
Beans	212,000	210,000	204,000
Pens	67,000	80,000	91,000
Potatoes	7,510,000	7,476,000	7,605,000
Turnips and Swedes	24,431,000	24,196,000	25,314,000
Mangold	9,696,000	9,525,000	9,275,000
Hay (all kinds)	12,419,000	12,403,000	15,395,000
Hops	18,000	25,000	13,000

I have the honour to be, Sir,  
Your obedient Servant,

April, 1916.

R. H. REW.

TABLE 12.—WHEAT:—TOTAL PRODUCE, ACREAGE, AND YIELD PER ACRE, IN 1915, IN EACH COUNTY OF ENGLAND AND WALES; COMPARED WITH THE YIELD FOR 1914 AND 1913, AND THE AVERAGE OF THE TEN YEARS 1905–1914.

89

## AGRICULTURAL STATISTICS, 1915.

### PART III.

---

#### REPORT TO THE SECRETARY OF THE BOARD OF AGRICULTURE AND FISHERIES.

SIR,

I BEG to submit the third part of the volume of Agricultural Statistics for 1915, containing particulars of the prices of corn, live stock, and other agricultural commodities, of supplies of live stock at markets in England and Wales, and of the trade in live stock between Ireland and Great Britain.

#### PRICES OF CORN.

Prices of corn during 1915 (Tables 25-30) have been higher than for many years past. The average "Gazette" price of British wheat, 52s. 10d. per quarter, was higher than in any year since 1877; and that of barley, 37s. 4d., was the highest since 1878. These two cereals were thus at a level which is approximately the same as that of the 'seventies. Oats were some 5s. per quarter above that standard, the average for the year, 30s. 2d., being in fact the highest since 1818, and about equal to the price during the Napoleonic wars.

The price of wheat fluctuated much during the year. It opened at 44s. 4d. for the first week in January, and rose fairly steadily until the maximum for the year (62s.) was reached about the middle of May. From this high point it fell rather rapidly, reaching 49s. 5d. by the beginning of July, but rose again slowly to over 55s. during the next month. The prospects of an abundant production in the United States then brought about a fall, and the lowest average of the year, 42s. 9d., was recorded during the week ended September 18th. It soon rose again, however, and the end of December found the average standing at 54s. 9d. per quarter. Barley was subjected to more gradual changes; the first two weeks of the year showed the lowest average (29s. 10d. and 29s. 7d.), from which point there was a gradual but rather irregular rise, until October,

when the price increased rather more rapidly and a maximum of 48s. 11d. was touched at the beginning of December. The year was noteworthy chiefly by the absence of the usual low level during spring and early summer (due to the few sales at that period being almost entirely of the lower-priced feeding grades). Oats showed very little fluctuation indeed, the extreme range of the weekly average being only between 26s. 1d. and 32s. 8d.

The high prices of corn prevailing in 1915 resulted in an increase in the value of 100*l.* of tithe rent charge, which amounted to 83*l.* 2*s.* 6*d.* for 1916, or 6*l.* 1*s.* 2*d.* more than in the preceding year (Table 30).

The quantity of British wheat returned as sold at the markets scheduled under the Corn Returns Act, 1882, amounted to 3,225,198 quarters, the largest amount since 1908, no doubt as a consequence of the big production. Of barley, on the other hand, the amount so returned was only 2,552,127 quarters, or about three-fourths of the quantity in 1914; the amount of oats (1,181,480 quarters) was very slightly more than in 1914.

#### LIVE STOCK AND MEAT.

Prices of fat cattle (Table 32), which had shown a sharp rise in December 1914, began the year 1915 with another rise of about 6*d.* per stone in January. Prices increased still further, rather slowly at first, but rapidly in May, and the next three months showed the highest quotations of the year, first quality Shorthorns reaching 13*s.* 3*d.* per stone in August. Prices fell away materially in the following three months, and December found them at about 1*d.* per lb. above those ruling at the end of 1914. On the whole year, the average price of fat cattle was about 2*s.* 6*d.* per stone above that of the previous year. Comparative records with earlier years are lacking, but it may safely be said that the prices ruling for British fat cattle in 1915 were higher than for at least forty years previously. Veal calves were dearer by about 1*d.* to 1*½d.* per lb. on the year.

At the markets scheduled under the Markets and Fairs (Weighing of Cattle) Act, 1891, the average price returned of all the fat cattle weighed and priced was 48*s.* 9*d.* per live cwt., this being 9*s.* 1*d.* per cwt. above the average of 1914, which was itself the highest recorded since the Act came into force.

Fat sheep increased in price by about 1*½d.* per lb.; apart from a rise in price during the spring, they fluctuated very little in the course of the year.

Pigs made about 1*s.* 8*d.* per 14-lb. stone more than in 1914. There was a rapid rise during the first four months of the year, followed by a period of nearly stationary prices until about September, when there was another abrupt rise, and at the end of the year both bacons and porkers were making over 10*s.* per stone.

Store cattle (Table 33) also increased in price, yearlings by about 1*l.* per head, but three-year-olds by 2*l.* to 3*l.*; and

store sheep were up by 3s. to 4s. per head. Milch cows (Table 32) increased steadily from May onwards and the average for 1915 was fully 2l. to 3l. higher than that of 1914, while the December level for first quality Shorthorns in milk was barely short of 30l.

The price of meat (Tables 24 and 35) naturally followed that of the live animal. The best Scotch beef made nearly 20s. per cwt. above the quotations of 1914, while English and Irish port-killed beef were nearly as much above the previous year; and like cattle, prices were much the highest during summer. Imported beef increased by a very similar amount. British mutton was about 10s. per cwt. higher, but the cheaper Argentine increased by over 13s., and New Zealand by 15s. per cwt.; similar figures apply to the imported lamb, but British lamb was only about 5s. to 6s. dearer on the year.

Bacon increased steadily and fairly rapidly in price throughout the first nine months of the year, and then remained at a high level till the end; the average was some 17s. per cwt. above 1914 in the case of Irish (green) sides, and 13s. to 15s. in the case of Canadian (Table 36). Hams increased rather slowly at first, but more rapidly afterwards, while the rise was even greater in the autumn, so that prices in December were 25s. to 40s. per cwt. above those ruling at the beginning of the year. Hams thus pursued an opposite course to that of 1914, when they fell steadily, and the result is that in 1915 they were very few shillings above the previous year, and only very slightly above prices prevailing in 1913.

#### DAIRY PRODUCE.

Contracts with farmers for milk were considerably higher than in 1914. At Lady Day, London contracts were made at 9d. to 10d. per imperial gallon for the six summer months, an advance of about 1½d. to 2d. on the previous year's prices; and most farmers made their contracts to Michaelmas only. Similar prices were obtained at Birmingham and Manchester. In September a further rise had to be recorded, contracts for the six winter months being made at 12½d. to 14d. per imperial gallon at London, 12d. to 13d. at Birmingham, and 12d. to 14d. at Manchester.

Butter (Table 36) was also dearer, British by fully 2d. per lb., Irish and Danish by about 30s. per cwt., and Colonial by some 25s. per cwt. British butter, although higher all through than in the corresponding months of normal years, was nevertheless relatively most expensive during the winter, but Danish and Colonial showed no fall during the early summer, as did British. The various sorts of cheese recorded in the Board's return were all dearer by some 15s. per cwt. than in 1914.

British eggs were dearer by 2s. 6d. or more per great hundred, Irish by nearly 3s., and Danish by 4s. to 4s. 6d. English poultry showed a comparatively small rise—only about 4d. per head in the case of fowls and ducks; geese were rather dearer, but turkeys made no more than in 1914. Foreign fowls and ducks increased by fully 6d. per head, but turkeys were cheaper.

#### OTHER AGRICULTURAL PRODUCE.

Among potatoes (Table 37), the earliest harvested, including "new" potatoes (both British and imported) were rather cheaper than in 1914; but the second earlies and late varieties, forming the bulk of the crop, were much dearer. On the whole, they were dearer during the winter and spring months than in summer and early autumn. Most vegetables were dearer, particularly onions, peas, tomatoes, cucumbers and beans; but home-grown asparagus, cabbage, carrots, cauliflowers, lettuce and watercress showed practically no change as compared with 1914.

English apples (Table 38) were dearer by perhaps 2s. per cwt. in the case of most dessert varieties, while cooking kinds only increased slightly as compared with 1914. American apples were rather lower in price, but Australian and Tasmanian were dearer by 5s. to 7s. per cwt. Gooseberries, damsons, and black currants showed the greatest relative increase in price on the year; but, while English red currants were about stationary, nearly all British plums were cheaper on the year.

Hay was much dearer, chiefly in the autumn months, as a result of a rather short crop: straw (both wheat and oat) also went up in price (Table 40). Mangolds and swedes for cattle-feeding were a little higher (Table 38).

Hops (Table 42) increased very much in price, Mid Kents, for instance, being throughout the season quite 30s. per cwt. above the 1914 level, while Sussex and Worcester hops were relatively even higher.

Wool (Tables 44, 45) showed as great an increase during the year as almost any commodity; it rose by some 3d. per lb. in the case of the most important varieties between January and April, and then remained fairly stationary at a high level throughout the rest of the year. Prices at Bradford were quite 4d. to 5d. per lb. higher on the average of the year; while the prices obtained at the wool fairs throughout England were fully 6d. higher.

#### AGRICULTURAL INDEX NUMBER.

The agricultural index number, continued on the same lines as last year, shows a steady rise, broken only by slight checks during the summer. In January the general index number representing the average of such produce as is sold off the farm, was 25 per cent above the level of 1906-8, taken as a basis

of comparison. During the summer it was about 40 per cent. above, and by the end of the year it was fully 50 per cent. above 1906-8.

*Index Numbers of Prices of the Produce sold off Farms in England and Wales in 1915.*

Average Price, 1906-8 = 100.

Butter	100	123	127	128	117	109	107	115	121	125	182	134	140	123
Oats	100	161	180	179	177	187	186	182	180	163	159	179	177	168
Hops	100	101	116	110	106	111	114	145	147	140	136	145	143	140
Cheese	100	116	125	136	142	144	143	186	121	119	125	130	135	131
Beans and Peas	100	150	154	152	144	140	140	140	144	143	145	164	170	149
Vegetables	100	135	128	119	133	118	117	117	120	138	153	169	179	153
General Index Number	100	125	131	125	136	140	110	138	142	138	146	150	151	138

The annual index number for 1915 was 138, as compared with 111 in 1914. As compared with the earlier year, the greatest increases were in wool (190 as against 133), barley (166 as against 113), and hops (140 as against 95); the least rise is shown by fruit (105 as against 92). As compared with the average prices of 1906-8, the highest levels were attained by wool (190), barley (166), and oats (163); and the only form of produce that may be said to have fetched normal prices was fruit, which was only 5 per cent. above the standard selected.

SUPPLIES OF LIVE STOCK AT MARKETS (Tables 46-49).

The number of cattle entering the principal live-stock markets of England and Wales in 1915 shows a considerable increase over 1914. Taking only those markets for which comparative figures are available for four years, the entries of fat cattle amounted to 636,600, or 18,000 more than in 1914, and practically the same number as in 1913. Store cattle exposed

for sale also showed an increase from 460,000 to 491,000, but the latter number was still below that of 1913. Dairy cows were about equal in number to 1914, but calves showed a reduction from 147,000 to 131,000.

Fat sheep were rather less numerous than in recent years, but store sheep showed an increase of 100,000 over the figures of 1914, and were practically the same as in 1912. Fat pigs offered were more numerous than in 1914, but the store pigs were very slightly below the figures of the previous year.

The number of fat cattle weighed at the markets scheduled under the Markets and Fairs (Weighing of Cattle) Act, 1891, continues to show progress, from 164,453 in 1914 to 180,319 in 1915; but the increase is mainly in the northern towns, at many of which practically all cattle are customarily weighed, and these markets shared in the general increase in the number of cattle exposed for sale which was noted above as occurring throughout the country generally.

Store cattle weighed also increased, from 63,896 to 74,821, this being due to the increase from 34,000 to 44,000 (58 to 68 per cent. of the total store cattle) at Shrewsbury. Gateshead, with about 28,000 stores entering the market in each year, weighs all; while an interesting change is to be recorded at Bridgnorth, where in 1915 all the 1,923 store cattle were weighed, whereas only half the supplies were weighed in 1914. Weighing of stores is still rare at all the other scheduled markets.

Fat sheep weighed numbered 4,348 only as against 6,197 in 1914. Only four markets returned sheep as having been weighed, and in each the number only formed a very small proportion of the total. 28,753 fat pigs were weighed in 1915, as compared with 30,444 in 1914; the only towns where the practice is followed in the case of pigs are Birmingham, Newcastle-on-Tyne, and Oswestry, where from 10 to 15 per cent. of the fat pigs exposed for sale are weighed.

#### TRADE IN LIVE STOCK WITH IRELAND.

The number of horses imported from Ireland into Great Britain is returned at 17,811 in 1915, as against 30,753 in 1914, this figure being lower than for very many years past.

Cattle imported from Ireland amounted to 840,735, as compared with 944,578 in 1914 and a maximum of 1,108,159 in 1913, but the number was nevertheless above the average in ordinary times. Of the total, 363,272 were fat, 380,270 were stores for fattening, 44,460 milch cows, 16,265 springers, and 27,009 calves; each of these items being rather less than in 1914, but somewhat above the average, except calves, which were much less than in most recent years.

Sheep imported in 1915 numbered 220,896 and lambs 259,495, the total of 480,391 comparing with 537,539 in the previous year. These numbers were below the average, but

shipments of sheep from Ireland have been declining since the early nineties.

Pigs have also been declining of late years, but the total of 179,056 for 1915, which comprised 171,963 fat and 7,093 store pigs, shows some recovery from the very low total (147,922) in 1914.

From Great Britain to Ireland there were exported 5,168 horses (4,331 in 1914), comprising 1,045 stallions, 2,685 mares, and 1,438 geldings. Stallions have been steadily increasing, and geldings decreasing, for many years past: the number of stallions is the highest on record, but the geldings are the lowest for more than twenty years.

Cattle sent to Ireland amounted to 461, sheep to 18,702, and pigs to 33; the export trade in these animals is a very variable one, and the numbers do not differ materially from the average of the past five years.

I have the honour to be, Sir,

Your obedient Servant,

R. HENRY REW.

October 1916.

Imperial Bank of DUTCH GUIYAN. In each Year there  
shall be an account if this sum had been disbursed  
and whether spent on the Garrison and Garrison Pioneers.

*Anti-The National League Team of British Columbia* by John L. G. Thompson, 1922. This copy is one of three known; there is also one at the University of Victoria. It is bound in blue, green, and gold leather.
